Grape Ivy (Cissus nodosa)

Grape Ivy is a large vine. It has serrated leaves that are 2.5-7" long and 1-2" wide. The small red or purple flowers grow in clusters. Some have spiral tendrils growing opposite of the leaves. The dark red berries are about 1" and have one or two seeds. This invasive vine has a smothering growth habit. It will quickly climb nearby trees and structures. Let’s stop it before it becomes a problem on Kaua’i.

What can you do?
KISC will be in your area conducting property surveys. If you believe that you have seen this plant, record its location (GPS if possible), try to collect it, and call KISC at 808/821-1490. Since this pest is known to only have low distribution on the island, it is important to report it. We will be happy to help with identification, survey, and possible removal of this pest.
